
Internet Assisted Review (IAR) Version 4.2.9 Release Notes for Reviewers

New Features

Error Submitting Critiques with Tracked Changes

A new error message displays when IAR attempts to upload a critique file containing Track Changes. The error message is as follows:

Critique cannot be processed. Please accept all changes before uploading.

To successfully upload the critique, make sure all Track Changes are removed/accepted.

Meeting Password Screen

Scientific Review Officers (SROs) have a new feature for creating meeting material passwords. Restricting access to meeting material documents by using a password adds an extra level of security. Not all SROs will use this feature.

If an SRO has created a password, you can view it by selecting the **View Password for Materials** link from the *List of Meetings* actions which will open the *View Password for Meeting Materials* screen, showing the password.

Prior to this release, some SROs used the *CD Password* screen for this information. *CD Password* has been retired.
